

The Biggest Water Saving Device in 140 Years

A kit, which fixes on top of existing plastic WC siphons and connects to the front mounted flush handle. Do not even have to turn the water off. Invented in Yorkshire, made in Yorkshire by David Wilks, a former technology, science and maths teacher. Best invention winner, British Invention Show 2004. Designed to be the most economical way to conserve water resources. A complete installation is shown below. The parts are in green and white. A competent person can fit it in about fifteen minutes.

Operation

A siphon stops flushing when air enters the siphon. The Interflush is simply an air valve on top of the siphon, it is open when the flush handle is up and closed when the handle is down.

1. Press the lever (starts the flush and closes air valve)
2. Hold down to continue flush (air valve is closed)
3. Release when pan is clear (air valve is open, air enters to stop the flush)

The users stops the flush just as soon as the pan is clear.

No water is wasted whatsoever.

Saves 47% of the flushing water, nothing can flush a toilet with less water.

Low Cost & Easy to Install

**saves 47%
of
flushing
water**

Benefits

Cuts water bills dramatically:

- Households 20%
- Businesses 42%
- Schools 30%

Short payback time measured in weeks not years.

Based on the siphon, can NEVER leak, unlike valve flushing devices, which are known to leak.

Easy to operate, no memory skills required

Maintenance free.

Designed to last.

Guaranteed for approximately 200,000 flushes.

WRAS tested.

**The biggest water saving
device in 140 years**

Price/Order

£14.95

+ £1.95 postage and packaging

For your convenience we allow credit card or cheque payments. Please make all cheques payable to Varyflush Ltd.

How to Order

1. Order direct by phone on 0845 045 0276
2. Fax the order form to 0845 045 0276
3. Fill in the order form and post to us at the address below
